-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
 - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
 - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
 - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Objections

2. Claim 1 is objected to because of the following informalities:
 - Line 14, "house" should read --housing--.Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000.

Art Unit: 2861

Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

4. Claims 1-3 are rejected under 35 U.S.C. 102(e) as being anticipated by Tachibe et al. (U.S. 6,195,190).

Tachibe et al., an acknowledged prior art, discloses an optical beam scanning device having a light source (11) emitting a light beam directed to a mirror of a mechanical deflector (polygon mirror 15) through a first optical system (cylindrical lens 20), the light beam being deflected in a main scanning direction by the mirror surface of the deflector through a second optical system (scanning lenses 7) to a surface to be scanned (light sensitive body) moving in a sub-scanning direction, the angle of said mirror surface changing due to rotation of the mirror, wherein the light source, the first optical system, the mechanical deflector and the second optical system is contained in a housing (casing 2) (Fig. 1) and wherein the mechanical deflector is directly mounted to said housing (Fig. 2), the material of said housing has heat conductivity smaller than that of a part of said mechanical deflector in contact with said housing (the casing 2 being made of magnesium, and the polygon mirror 15 being in contact with the casing through a highly heat conductive elastic sheet 17) (col. 7, lines 28-43).

Tachibe et al. further teaches :

- The mechanical deflector being covered by a cover (8) having an optical window (10), and thereby, an air flow (convection of air) occurring due to rotation of said mirror is kept within said cover (col. 7, lines 11-17);

Art Unit: 2861

- A cooling part (cooling blower, not shown) forcibly cooling said mechanical deflector (col. 7, lines 44-52).
